DISCOVER

Fluval first broke onto the aquatic scene in 1975 by introducing the world's first 3-stage filter with synchronous motor technology - a landmark breakthrough that is still utilised in the industry today.

Since then, Fluval has built a legacy around this pioneering spirit, relentlessly adapting to consumers' changing needs and tastes to build products that are not only at the forefront of technology, but also setting the bar in terms of quality, style and functionality.

From filtration to heating, aquariums to food and water care, Fluval prides itself on creating innovative solutions for fresh and saltwater enthusiasts of all ages and skill levels.

FLUVAL

Ingredients Should Be Harvested, Not Engineered.

Fluval believes in using only the freshest, purest ingredients from natural sources in all its foods. Our nutritional experts extensively travel the globe to establish and maintain relationships with a select group of reputable and reliable suppliers that share this vision, allowing us to offer consistent, high-quality nutrition that far exceeds industry standards.

To provide added assurance that your fish receive great, ultra-palatable nourishment, we never add fillers or artificial colourings to our formulas, and always produce food in small batches for superior freshness and quality control.

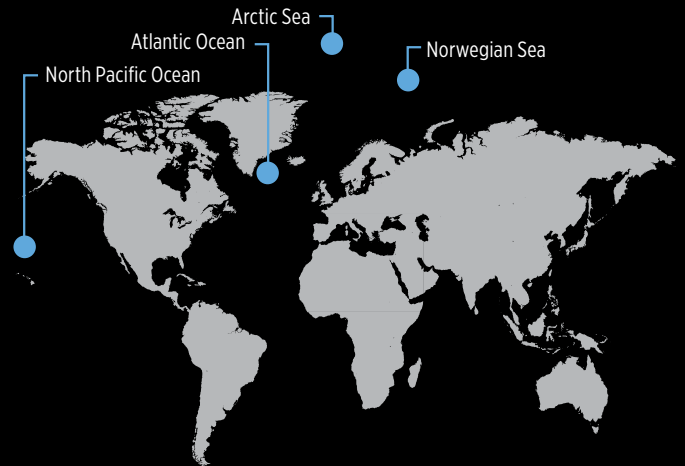

FLUVAL

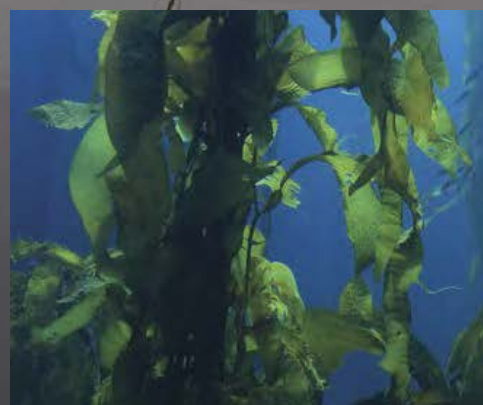

Premium Proteins

Fluval foods feature superior, wild-caught protein sources such as Herring and Krill, which are harvested from the pristine cold waters of Norway and Iceland. In our Vegetarian formula, we've included Spirulina Pacifica from Hawaii, which is world-renowned as the best-quality spirulina protein available. First-class proteins such as these not only provide powerful energy and growth for your fish, but also help to fortify a greater immune system for increased disease protection.

The smallest details can make the biggest difference

FLUVAL

Multiple Proteins

Protein is the most important component of a fish's diet, however, not all proteins are created equal. Fluval not only provides premium proteins, but also a variety of these sources to build a better amino profile, which is a major factor in determining growth and development. Always read the label to ensure proteins are listed within the first few ingredients.

Powerful Vitamins & Minerals

Vitamin and Mineral deficiencies are often difficult to detect and can result in fish loss. Fluval includes a complete, balanced mix of choice, nutrient-dense vitamins and minerals that help improve digestion, fertility, eyesight, immune and nervous system defense, bone structure and overall growth.

No artificial colours

Unlike many other fish foods available on the market today, Fluval foods contain no article colourings, which are unnecessary and serve no nutritional value. Our formulas are only naturally-coloured due to the wholesome ingredients they include.

Rich in Omega-3 & 6

All Fluval formulas contain quality salmon oil, which helps to maintain skin and fin condition and offer added protection from de-pigmentation as well as the harmful effects of cuts and scrapes.

Sustainable Kelp

All Fluval food formulations contain highly nutritious Kelp, a rich source of Omega-3, in addition to polyunsaturated fatty acids, proteins and complex carbohydrates, for a complete diet. We take great measures to ensure our Kelp is harvested in an ecologically-responsible way to help preserve ocean stocks and provide future generations with a sustainable supply.

FLUVAL

As fresh as the catch of the day

FLUVAL

Tropical Food

The increased levels of Atlantic Herring and Norwegian Krill featured in our Tropical formula will enhance your fish's colours and energy level, while also encouraging strong growth.

Atlantic Herring

Norwegian Krill

Atlantic Shrimp

Green Mussels

Ingredients

Herring meal 38%, krill 25%, potato meal, wheat flour, shrimp meal 5%, dried garlic, mussel meal 3.0%, dried kelp 3.0%, soy flour, turmeric powder, crushed insects.
